

Full Circle

1/2 Round

1/4 Round

To measure for casing of a true radius window:

A true radius means that the arc is part of a circle. Measure inside diameter or radius of circle (specify). Add 1/2" to diameter for casing reveal (1/4" each side).

Eyebrow

Height is less than half the width

Eyebrow w/ springline

Eyebrow/circle segment

To measure for casing of an eyebrow:

To find "X"—measure inside to inside of jamb at the widest point.

To find "Y"—measure from the center of "X" to top inside of jamb. Make sure you are 90° to the chord "X".

We will calculate the diameter of the circle from these measurements. We will allow for 1/4" reveal on casing unless specified otherwise.

Full Ellipse

Not a true radius

1/2 Ellipse

Not a true radius

To measure for casing for an elliptical window:

Elliptical casing requires a hard template. Templates should be 1/4" MDF or masonite. Attach sheet to the wall, covering the window. Cut out with router and flush trim bit. Follow inside of curve with ball bearing bit. Paper templates are *not acceptable*, as there is no accurate way to transfer the line to solid material. Consider cutting template before window is installed, especially if it is to be installed up high.
